

# Frontend Developer Assignment #1

---

When completing this assignment you are allowed to use the newest HTML and CSS standards.

## Prerequisites

You need a basic understanding of HTML/CSS. You are to use Bootstrap library.

## What you need to do:

1. Reproduce what you see on the image [login.png](#) as HTML and CSS
2. Ensure page is responsive (desktop, mobile phone, tablet)
3. Check in your changes either to github or gitlab
4. Send us an email with a link to your branch on Github or Gitlab
5. (bonus) send us a link to the solution hosted (if possible)

## Whats important:

- Don't worry about browser backwards compatibility
- Quality of HTML and CSS
- General Structure
- Responsiveness

## Extra credit:

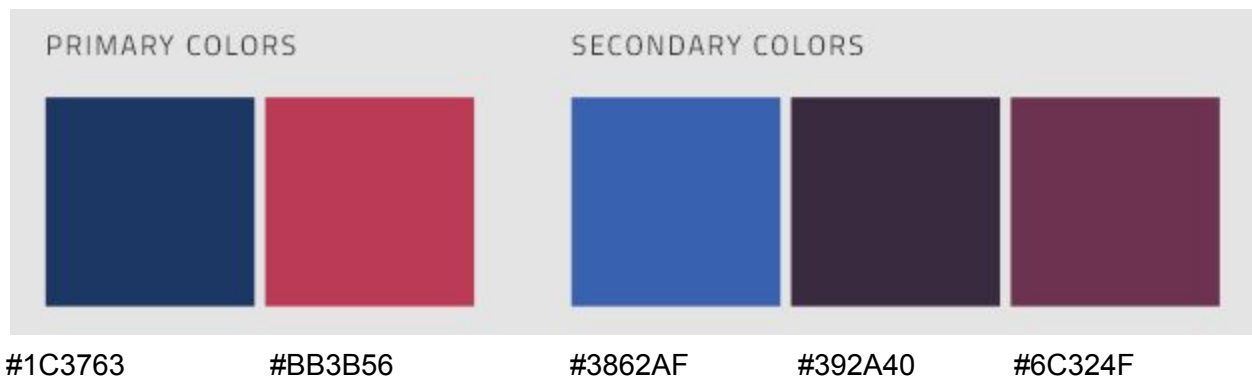

How can we make links and buttons more interesting?

Can we do something to visualize when an input box is active.

How can we make sure a valid email and a password is entered, and what about errors?

## Guideline

We used a google font for this project called 'Noto Serif', Titillium Web & 'Open Sans'

You can get the images of people, logos via this [URL](#)

Solve the assignment with as much effort as you see fit.  
Happy coding.
